## Education

---

### Bachelor of Computer Engineer

Palestine Polytechnic University, Palestine

2018-2023

## Projects

---

### Object Categorization for Industrial Application

Palestine Polytechnic University – Graduation Project

It is a cost-effective, deep-learning-based object categorization system for automated sorting on assembly lines, implementing a highly efficient automated system that can identify and categorize three types of objects, resulting in high detection accuracy of 90%, and an average inference time of 500ms.

### Delivery Food App

Full stack food delivery application using Reactjs, Firebase, Framer motion, and CSS. This project allows the user to add new items and maintain all the things over the firestore cloud database.

### Simple CRM System

Gaza Sky Geek (React Training)– Graduation Project

Simple CRM system building with reactjs aims to store customer and prospect contact information and identify sales opportunities.

### Friends Book

Web Course

Built a Facebook system using PHP language and phpMyAdmin.
